

Contrast Echocardiogram

Patient Information

Cardiology Department

Author ID: JS
Leaflet Number: Card 014
Version: 5
Name of Leaflet: Contrast Echocardiogram
Last reviewed: December 2019
Next Review Date: December 2021

What is it?

An echocardiogram or echo is a scan that uses ultrasound (sound waves) to produce pictures of the heart. The scan is painless and does not use radioactivity.

During a contrast echo a contrast agent is injected which improves the quality of the images that are being recorded.

Benefits

- A contrast agent is used to help improve the quality of the images
- A contrast echo is also used to help diagnose if you have any holes in the heart.

What does the procedure involve?

You will be taken into a private darkened room in the cardiology department at RAEI. One or two members of staff will usually be present. The person performing the test is called an echo-cardiographer they may be male or female. The echo-cardiographer will usually be a Cardiac Clinical Physiologist and not a doctor. Any questions you may have about the result will have to wait until you see the doctor in clinic.

You will be asked to undress to the waist and be offered a gown that should be left open at the front. You will then be asked to lie on a couch on your left side.

Stickers will be attached to your chest and connected to the machine. These will be used to monitor your heart rate during the scan. A drip will be placed in your arm.

The echo-cardiographer will record a number of pictures of the heart. Whilst this is happening, a contrast agent will be injected into the drip. If the doctor is looking for the presence of a hole in the heart, you may be asked to cough and sniff whilst the images are being recorded.

The echocardiogram will take approximately 30 to 40 minutes to complete.

Are there any special precautions that I need to take before the echocardiogram?

No, you can take all your medication as normal. You can eat and drink as normal.

At the end of the echocardiogram

Once the echocardiogram is complete, you can get dressed and leave. There are no limitations as to what you can do after the scan. You will be able to drive.

Risks

- There is an extremely small risk (1 in 10,000) of developing an allergic reaction to the contrast agent used. If you have had allergic reactions to any medicines before please inform us before starting the scan.

You will be asked to stay for a further 15 to 20 minutes to ensure that you do not have an allergic reaction. If after this time you are worrying that you are having an allergic reaction you should contact the department or your GP if out of hours.

Results

These will be given to you at the next clinic appointment by the referring consultant.

Ask 3 Questions

Become more involved in decisions about your healthcare. You may be asked to make choices about your treatment. To begin with, try to make sure you get the answers to three key questions:

1. What are my options?
2. What are the pros and cons of each option for me?
3. How do I get support to help me make a decision that is right for me?

How We Use Your Information

For details on how we collect, use and store the information we hold about you, please take a look at our “how we use your information” leaflet which can be found on the Trust website: https://www.wwl.nhs.uk/patient_information/leaflets

This leaflet is also available in audio, large print, braille and other languages upon request. For more information please ask in department/ward.
